

Layer 1: MAC Logic

1. Reader Command Gen.

(Payload & Protocol Logic)

2. Downlink Overhead

($T_{pre} + Payload\ Duration$)

Layer 2: High-Fidelity Physics Engine

3. Response Arbitration

(RSSI Check & Capture Effect)

Raw Signal

4. Bit-Level Impairment Injection

Clock Drift

(Coherence Limit)

Channel Noise

(Random Bit Flips)

Output: Channel Noise Mask

5. Result Feedback Loop

(Return Status + Bit Mask)

Next Time Slot
